

Role of User Experience Designer at Oracle Ltd.

My professional journey truly started when I joined CGI Group as a Oracle DB Administrator in Bengaluru. It was however, only for a brief period before my skillsets and interests were recognized and I was moved to the User Experience team.

Over the next 6 years, I had interacted with, and had the wonderful opportunity to work with some of the pioneering designers in the Industry, as well as in the Academic sector. My understanding of design has become much more sophisticated than what it was when I started off. And that only makes me more humble - in a scenario where there is so much more to learn at any point in the journey, it really helps to be curious.

And hence I believe in research - a fine balance of approaching every problem from an unbiased perspective, while analysing the market and identifying new methods and practices that can be repurposed.

I chose Digital Game Design as my major in my Masters because I believe that games as products explore user experience in great detail and depth. I had the opportunity to design wonderful experiences for users through play. It helped me look at products not just as a service, but as a journey, an experience that the user engages with on will. And that had a truly pivotal force on my approach towards problems and solutions.

Although a good chunk of my interest in joining Oracle was because of a dream I had in my early career, I have always deeply admired the highly functional and perfection-driven products that Oracle has made.

I believe that I can offer my multi-disciplinary skillset and experience to design delivering products and features at Oracle.
